

BeyondTrust Executive Brief

Delegate privileges with certainty and clarity

BeyondTrust empowers IT to eliminate the risk of intentional, accidental and indirect misuse of privileges on desktops and servers with globally proven solutions that increase security and compliance without impacting productivity.

BeyondTrust provides Privileged Access Lifecycle Management for granular privilege brokering and powerful central management so companies no longer have to choose between productivity or security and compliance. BeyondTrust solutions are making privilege simple.

With BeyondTrust you can now:

Eliminate intentional, accidental and indirect misuse of privileges: In order to increase security and compliance, organizations must not distribute root passwords or admin rights. BeyondTrust makes it simple to delegate the necessary privileges for authorized activities no matter the size of your IT environment.

BeyondTrust allows you to:

- ▶ Enable users to do their job safely without root passwords or administrator rights
- ▶ Broker permissions transparently, ensuring maximum user productivity
- ▶ Manage server and desktop permissions centrally and efficiently
- ▶ Allow users to check privileged passwords in and out for application and database access
- ▶ Automate detailed logging and auditing of privileged access
- ▶ Satisfy regulatory requirements by eliminating excess privileges
- ▶ Simplify IT complexity
- ▶ Scale to the largest deployments

About BeyondTrust:

In today's collaborative IT environments, organizations can no longer build walls to keep more people out. Instead, people need increased access and boundaries to protect against security risks.

BeyondTrust gives organizations the tools to control these risks so they are confident their enterprise is secure and certain that users are able to do their job without interference.

BeyondTrust is a proven leader with more than 25 years of experience. Relied on by more than 1200 clients and more than half the companies on the Dow Jones Industrial Average, BeyondTrust provides a globally proven solution to privilege authorization enabling users to access the IT resources they need when they need it.

BeyondTrust has solved the problem of granting excess privileges by transparently brokering necessary permissions and enabling users to run all authorized applications, tasks and commands.

BeyondTrust provides a unique solution to avoid the risks caused by granting excess privileges such as admin rights and root passwords. Permissions are transparently brokered and granularly managed through a central console. Productivity is uninterrupted and help desk calls are significantly reduced optimizing IT efficiency. When IT empowers users to run without excess privileges, the risk from malware, viruses and malicious users, is minimized and the enterprise is secured.

BeyondTrust Offers:

- **Security** - No one has unchecked, complete control over IT resources and confident users can perform authorized activities with their delegated privileges.
- **Productivity** - No tradeoffs between security and productivity; transparent, friction-less environment allows users to do job efficiently.
- **Compliance** - Close all backdoors; audit trails and event logs provide transparent accountability meeting and facilitating regulatory compliance.

BeyondTrust solutions provide the most effective method to secure and simplify complex IT environments.

Simple to deploy and easily managed through a central console. The BeyondTrust solution includes:

Privilege Manager

Enables desktop end users to run all applications without administrator rights. System administrators assign permission levels to Windows applications and processes via Group Policy. All privileged access is recorded for audits.

PowerBroker

Provides system administrators the ability to delegate privileges and authorization without disclosing the root password on Unix, Linux, Mac OS X server platforms. All privileged access is recorded for audits including key stroke information.

PowerKeeper

Allows passwords to be checked-in and out of a vault to access applications and databases.

Business Solutions

Granular Delegation: Privileges are brokered transparently to the user based upon what they need to do their job.

Centralized Administration: Create, manage, modify and propagate policy through a central console to all business units. In Windows environments, use native Group Policy console.

Facilitate Regulatory Compliance: Meet compliance regulations by running users with appropriate privileges and secure, audit-ready logging.

Simplified Governance: Centrally manage policies in geographically distributed and multi-platform IT environments.
